

10967A: Fundamentals of a Windows Server® Infrastructure

Course Details

Course Code: 10967A

Duration: 5 days

Notes:

- This course syllabus should be used to determine whether the course is appropriate for the students, based on their current skills and technical training needs.
- Course content, prices, and availability are subject to change without notice.
- Terms and Conditions apply

Elements of this syllabus are subject to change.

About this course

Learn the fundamental knowledge and skills that you need to build a Windows Server infrastructure with Windows Server 2012.

This five day course provides the networking, security, and system administration information that you need to implement a Windows Server infrastructure. It covers the basics of installation and configuration, storage, network infrastructure, network components, network protocols, server roles, Active Directory Domain Services (AD DS), Group Policy, IT security, server security, network security, security software, monitoring server performance, and maintaining a Windows Server.

This course includes the foundational level knowledge to prepare students to start a career or cross train in Microsoft Windows Server technologies.

Audience profile

Students for this course are just starting their Information Technology (IT) careers or want to change careers into Windows Server technologies. This fundamental knowledge and skills can be used by home computer users, small business owners, academic students, information workers, technical managers, help desk technicians, or students who want to cross train from another technology.

This course is a first step in preparing for a job in IT or as prerequisite training before you start the Microsoft Certified System Administrator (MCSA) training and certification path.

At Course Completion

After completing this course, students will be able to:

- Perform a local media-based installation of Windows Server 2012.
- Select appropriate storage technologies and configure storage on a Windows Server.
- Describe fundamental network components and terminology so you can select an appropriate network component.
- Implement a network by selecting network hardware components and technologies and determine the appropriate network hardware and wiring components for a given situation.
- Describe the protocols and services within the Transmission Control Protocol/Internet Protocol (TCP/IP) suite of protocols and implement IPv4 within a Windows Server environment.
- Describe and implement server roles.
- Implement and configure an Active Directory Domain Service (AD DS) forest.
- Describe the concept of defense-in-depth and determine how to implement this approach with Windows Server.
- Identify the security features in Windows Server that help to provide defense-in-depth.
- Identify the network-related security features in Windows Server to mitigate security threats to your network.

10967A: Fundamentals of a Windows Server® Infrastructure

- Identify and implement additional software components to enhance your organization's security.
- Monitor a server to determine the performance level.
- Identify the Windows Server tools available to maintain and troubleshoot Windows Server.

Prerequisites

- A basic knowledge of general computing concepts.
- Some experience working with Windows Client operating systems such as Windows 7 or Windows 8

Module 1: Installing and Configuring Windows Server 2012

This module explains how the Windows Server 2012 editions, installation options, optimal service and device configuration and general post-installation configuration all contribute to the functionality and effectiveness of your Windows Server implementation.

Lessons

- Windows Server Architecture.
- Installing Windows Server.
- Configuring Services.
- Configuring Devices and Device Drivers.

Lab : Installing and Configuring Windows Server 2012

After completing this module, student will be able to:

- Describe Windows Server components and architecture.
- Install Windows Server 2012.
- Configure services.
- Configure devices and device drivers.

Module 2: Implementing Storage in Windows Server

This module will introduce you to different storage technologies and discuss how to implement the storage solutions in Windows Server. There is also a discussion on how to create a resilient strategy for your storage, helping to avoid unplanned downtime and loss of data.

Lessons

- Identifying Storage Technologies.
- Managing Disks and Volumes.
- Fault Tolerance.

Lab : Implementing Storage in Windows Server

After completing this module, students will be able to:

- Identify a suitable storage technology.
- Manage storage within Windows Server.
- Implement disk fault tolerance.

Module 3: Understanding Network Infrastructure

In this module, students will learn how to describe fundamental network component and terminology thus enabling the student to select an appropriate network component in a particular scenario.

Lessons

- Network Architecture Standards.
- Local Area Networking.
- Wide Area Networking.
- Wireless Networking.
- Connecting to the Internet.
- Remote Access.

Lab : Selecting Network Infrastructure Components

After completing this module, students will be able to:

- Describe physical network topologies and standards.
- Define local area networks (LANs).
- Define wide area networks (WANs).
- Describe wireless networking technologies.
- Explain how to connect a network to the Internet.
- Describe how technologies are used for remote access.

Module 4: Connecting Network Components

This module explores the functionality of low-level networking components, including switches and routers. In addition, the module provides guidance on how best to connect these and other components together to provide additional network functionality.

Lessons

- Understanding the OSI Model.
- Understanding Media Types.
- Understanding Adapters, Hubs, and Switches.
- Understanding Routing.

Lab : Connecting Network Components

After completing this module, students will be able to:

- Describe the industry standard protocol model.
- Describe wiring methodologies and standards.
- Describe adapters, hubs, and switches.
- Describe routing technologies and protocols.

Module 5: Implementing TCP/IP

This module describes the requirements of a protocol stack and then focuses on the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol stack.

Lessons

- Overview of TCP/IP.
- IPv4 Addressing.
- IPv6 Addressing.
- Name Resolution.

Lab : Implementing TCP/IP

After completing this module, students will be able to:

- Describe the Functionality of the TCP/IP Suite.
- Describe IPv4 Addressing.
- Configure an IPv4 Network.
- Describe IPv6 Addressing and Transition.
- Describe the Various Name Resolution Methods Used by TCP/IP Hosts.

Module 6: Implementing Windows Server Roles

This module explains the functional requirements of a server computer and how to select and deploy appropriate server roles to support these functional requirements.

Lessons

- Role-Based Deployment.
- Deploying Role-Specific Services.
- Considerations for Provisioning Roles.

Lab : Implementing Server Roles

Lab : Implementing Server Roles

After completing this module, students will be able to:

- Describe role-based deployment.
- Deploy role-specific servers.
- Describe deployment options for server roles.

Module 7: Implementing Active Directory

This module explains that, as a directory service, how AD DS stores information about objects on a network and makes this information available to users and network administrators.

Lessons

- Introducing Active Directory Domain Services (AD DS).
- Implementing AD DS.
- Managing Users, Groups, and Computers.
- Implementing Group Policy

Lab : Implementing AD DS

After completing this module, students will be able to:

- Describe the fundamental features of AD DS.
- Implement AD DS.
- Implement organizational units (OUs) for managing groups and objects.
- Configure client computers centrally with group policy objects (GPOs).

Module 8: Implementing IT Security Layers

This module explains how, in addition to file and share permissions, you can also use data encryption to restrict data access.

Lessons

- Overview of Defense-in-Depth.
- Physical Security.
- Internet Security.

Lab : Implementing IT Security Layers

After completing this module, students will be able to:

- Describe the risks posed by connecting to the Internet.

- Describe possible mitigations to these risks.
- Describe the Windows Server components and features that can help provide his Internet security.

Module 9: Implementing Security in Windows Server

This module reviews the tools and concepts available for implementing security within a Microsoft Windows infrastructure.

Lessons

- Overview of Windows Security.
- Securing Files and Folders.
- Implementing Encryption.

Lab : Implementing Windows Security

After completing this module, students will be able to:

- Describe the Windows Server features that help improve your network's security.
- Explain how to secure files and folders in the Windows Server environment.
- Explain how to use the Windows Server encryption features to help secure access to resources.

Module 10: Implementing Network Security

This module explains possible threats when you connect your computers to a network, how to identify them, and how implement appropriate Windows network security features to help to eliminate them.

Lessons

- Overview of Network Security.
- Implementing Firewalls.
- Internet Protocol Security (IPsec)

Lab : Implementing Network Security

After completing this module, students will be able to:

- Identify network-based security threats.
- Implement Windows Firewall to secure Windows hosts.

- Explain how to enforce corporate compliance.

Module 11: Implementing Security Software

This module explains how an information technology (IT) administrator can account for and mitigate the risks of malicious code, unauthorized use, and data theft.

Lessons

- Client Software Protection Features.
- E-Mail Protection.
- Server Protection.

Lab : Implementing Security Software

After completing this module, students will be able to:

- Implement Windows Server technologies and features to improve client security.
- Describe security threats posed by e-mail and how to reduce these threats.
- Explain how to improve server security using Windows Server security analysis and hardening tools.

Module 12: Monitoring Server Performance

This module discusses the importance of monitoring the performance of servers, and how you monitor servers to ensure that they run efficiently and use available server capacity. It also explains performance monitoring tools to identify components that require additional tuning and troubleshooting, so that you can improve the efficiency of your servers.

Lessons

- Event Logging.
- Performance Monitoring.

Lab : Monitoring Server Performance

After completing this module, students will be able to:

- Use the Event Viewer to identify and interpret Windows Logs, and Application and Services Logs.
- Measure system resource usage and identify component bottlenecks

Module 13: Maintaining Windows Server

This module explains the importance of system updates, how to troubleshoot the Windows Server boot process, and how to implement high availability and recovery technologies to improve system availability.

Lessons

- Troubleshooting Windows Server Startup.
- Server Availability and Data Recovery.
- Applying Updates to Windows Server.
- Troubleshooting Windows Server.

Lab : Maintaining Windows Server

After completing this module, students will be able to:

- Troubleshoot the Windows Server boot process.
- Implement high availability and recovery technologies to improve system availability.
- Explain the importance of system updates.
- Implement an appropriate troubleshooting methodology to resolve problems with Windows Server.
